MIDWIFE'S FINAL SCIENTIFIC WORK, JANUARY 2023
A CONTINUITY OF MIDWIFERY CARE MANAGEMENT IN MRS. W AT YUSMA
MEDIKA CLINIC BEKASI CITY IN WEST JAVA IN 2022

CASE SUMMARY

AKI is the number of maternal deaths from pregnancy, delivery, and postpartum in 100,000 live births, excluding deaths from other causes such as accidents or falls. One of them seeks to ensure that deliveries can be performed by medical personnel in medical facilities while simultaneously decreasing IMR. The goal of this project is to provide Mrs. W with thorough midwifery care at the Yusma Medika Clinic in 2022. Case studies are used in Comprehensive Midwifery Care for Mrs. W through Continuity of Care. Mrs. W has received ANC, IO T, childbirth, postpartum visits (KF), and neonatal visits as care (KN). In addition, complementary care is provided after postpartum care, such as the usage of herbal katuk leaves that are converted into clear vegetables to aid in breastfeeding and the consumption of BIT fruit to lessen anemia during pregnancy. According to the findings of comprehensive midwifery care, Mrs. "W" was in good health throughout her pregnancy, and the birth, puerperium, involution, newborn, and complementary care all went according to plan. The results of this thorough midwifery care included 12 ANC 10 T procedures, a normal delivery, 4 postpartum visits (KF), and 4 neonatal visits within normal ranges. It is advised that Yusma Medika Clinic keep up and enhance its supplementary treatment. Additionally, Mrs. "W" is capable of providing autonomous care that is practical for daily use.

Keywords : Pregnancy, Childbirth, Postpartum, Newborns.
