Database

The screenshot shows the phpMyAdmin interface for the 'gudangku' database. The left sidebar lists various tables: carts, categories, failed_jobs, migrations, model_has_permissions, model_has_roles, orders, password_resets, permissions, personal_access_tokens, products, roles, role_has_permissions, suppliers, transactions, transaction_details, and users. The main area displays a table of database statistics:

Source Code

The screenshot shows the Visual Studio Code interface with the 'HomeController.php' file open. The code defines a controller for landing pages:

```
<?php  
namespace App\Http\Controllers\Landing;  
  
use App\Http\Controllers\Controller;  
use Illuminate\Http\Request;  
use App\Models\Product;  
use App\Models\Category;  
  
class HomeController extends Controller  
{  
    public function __invoke(Request $request)  
    {  
        $products = Product::with(['supplier', 'category'])  
            ->latest()  
            ->paginate(6)  
            ->withQueryString();  
  
        $categories = Category::withCount('products')  
            ->latest()  
            ->get();  
  
        return view('landing.welcome', compact('products', 'categories'));  
    }  
}
```
